INTRODUCTION

The purpose of this manual is to familiarise the user with the different weight indicator operating modes, key functions and display instructions.

We recommend carefully following the instructions when programming the weight indicator, as to do otherwise could jeopardise proper scale operation.

In addition to having all the conventional features of a high precision scale, the indicator offers extra user features such as the function of converting the unit of measurement into pounds, converting net weight/gross weight, gross weight or net weight setpoint, in-out truck weighing, single scale universal repeater, multi-scale repeater, approved weight transmission to PC with alibi memory, +/- checkweighing, sample weight percentage, weight hold on display, peak sensor, weighing accumulator, piece counting. These features make it suitable both for industrial use as well as for legal use with third parties and in trade, meeting the most up to date needs as far as transmission and data printing via the two bidirectional serial ports.

This manual was written with the utmost care but we always welcome feedback on any inaccuracies you may find.

WARNINGS

The instrument is covered by warranty and **MUST NOT BE OPENED BY THE USER** for any reason. Any attempt to repair or modify the unit could expose the user to the risk of electrical shock and will render all warranty conditions null.

All problems with the unit or the system must be communicated to the manufacturer or the dealer from which it was purchased. In any case, **DISCONNECT POWER** before any operations.

The instrument is insulated between the dangerous voltage area and the parts that are accessible to the user.

- Do not pour liquids onto the indicator (except for models with IP65 protection or higher).
- Do not use solvents to clean the indicator.
- Do not expose the instrument to direct sunlight or sources of heat.
- Set or secure the indicator and the platform on a base with no vibrations.
- All the indicator connections must be made respecting the applicable standards in the installation area and environment.

Whatever is not explicitly described in this manual is to be considered improper use of the equipment.

Do not install in atmospheres with the risk of explosion.

The crossed out wheeled bin symbol on the product shows that it must be brought to appropriate separate waste collection centres at the end of its life cycle or returned to the dealer when purchasing a new equivalent product. Proper separate collection to then send the product to recycling contributes to preventing possible negative effects on the environment and to health and promotes recycling. Users who dispose of the product illegally shall face administrative sanctions as provided for by law.

MAIN FEATURES

POWER SUPPLY VIA MAINS

Every RLT range indicator is equipped with a specific power cable or charger, depending on the model. The only exceptions are the specific models for explosive atmospheres, in which case refer to the specific manual. The safety standards in force must be respected when connecting the unit to the 110/240V mains, including the use of a “clean” line with no disturbances or interferences caused by other electronic equipment. The power-on LED (if available) on the front panel comes on if the instrument is powered correctly. If there is an internal rechargeable battery, it is charged automatically.

POWER SUPPLY VIA BATTERY

Internal battery charge level indicator

 Charged battery

 Low battery

The **Lo!! bAtt** message precedes automatic instrument switching off.

Battery charging indicator

AUTOMATIC RESET WHEN SCALE IS SWITCHED ON

If a weight less than 10% of the capacity is on the scale when it is switched on, the weight is automatically reset. This function is useful in automatically resetting a container, pallet or small structure without having to recalibrate the scale.

Weights over 10% can be reset by changing the original calibration. Automatic reset when the scale is switched on can be deactivated.

 *Automatic reset when the scale is switched on requires advanced configuration.*

KEYBOARD LOCK

The indicator keyboard can be deactivated in order to avoid accidentally carrying out the available functions.

 *Keyboard lock requires advanced configuration.*

SAVING BATTERY POWER

The instrument is equipped with advanced battery power saving functions designed to increase operating time.

 *Saving battery power requires advanced configuration.*

AUTOMATIC SWITCHING OFF

This function activates when the scale is completely unloaded and has not been used for a set amount of time (*standard 5 minutes*). To activate or deactivate automatic switching off, go into the autooff section in the configuration menu.

WARNING

In accumulation and formulation mode, automatic switching off causes the accumulation in progress to be lost.

AVAILABLE TARE FUNCTIONS

The instrument allows you to choose from specific tare functions for your needs:

- **Locked** tare (standard factory configuration).
- **Unlocked** tare: automatically deleted every time the scale is unloaded. Useful in preventing errors when the tare is different for every weighing.
- Tare acquired automatically by the scale. Tare is only acquired if there is no other saved tare value.
- Tare function disabled.

To customise the tare function, go into the *tARE* section in the configuration menu.

THE DISPLAY

Number	Symbol	Description
(1)	→0←	The scale is unloaded and at zero (gross).
(2)	~	The weight is unstable.
(3)		The time is being shown on the display.
(4)	NET	The weight displayed is net. There is a saved tare.
(5,6)	G B	The weight displayed is gross.
(7)		Battery level.
(8)	Max= Min= e=	Metrics are being displayed.
(9)	LT	A locked tare is active.
(10)	PT	A manual tare is active.
(11)	W1 W2 W3	Indicate the range of active weighing.
(12)	lb ... Pcs	Units of measurement - Pounds (lb), tonnes (t), kilograms (kg), grams (g), number of pieces (Pcs).
(13)		The weight is being displayed in high resolution.
(14)	*	Indicates a key is pressed. In some operating modes, it indicates that a specific function is active.
(15)	SP1... SP4	Indicate the active relay ports (only with the optional board).

LETTERS:

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z

i

With numerical keyboard, **(F) + (7)** simply shows the current total without any printout/reset.

How to reset the total

a.

b.

i

With numerical keyboard, **(F) + (7)** simply shows the current total without any printout/reset.

How to print and reset the grand total

a.

b.

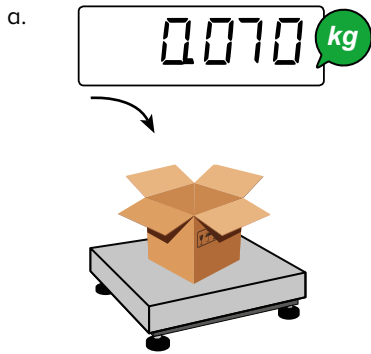

i

With numerical keyboard, **(F) + (6)** simply shows the current total without any printout/reset.

COUNTING - Count

How to sample and count

How to set the value

With the numerical keyboard, the combination of the **F** + **5** keys allows to type the desired quantity (in any amount).

Load the selected reference quantity

For a correct sampling, the reference quantity must have a weight of at least 0.1% of the maximum scale capacity.

Sampling in progress, please wait...

* With the numerical keyboard, the combination of the **F** + **7** keys allows to modify the sampling time. The more the time, the more the sampling precision.

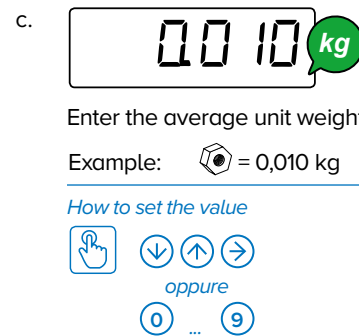

COUNTING - CoUnt

How to switch between pieces count and weight

How to enter the average unit weight (PMU)

For correct counting, you must set the known tare value or tare the empty container and fill it with the pieces to count.

COUNTING - CoUnt

Pieces counting of the total load

a.

b. Insert the tare value

How to set the value

c.

d.

e.

Select the desired reference quantity (5, 10, 20, ... 200 pieces)

How to set the value

With the numerical keyboard, the combination of the **F** + **5** keys allows to type the desired quantity (in any amount).

f. Take the samples (5, 10, 20, 30, 40, 50, 60, 75, 100, 200 pezzi).

g.

h.

Sampling in progress, please wait...

* With the numerical keyboard, the combination of the **F** + **7** keys allows to modify the sampling time. The more the time, the more the sampling precision.

i.

WEIGHT CHECK - CHECK

How to start the check with known reference weight

a. 

b. 

c. 

d. 

How to set the value

e. 

f. 

Enter the lower tolerance

How to set the value

g. 

h. 

Enter the higher tolerance

How to set the value

i. 

Example 1

To check a weight of 1000 g with +/- 5 g tolerance (that is, between 995 g and 1005 g), set:

t0 1000
L 00005
h 00005

Example 2

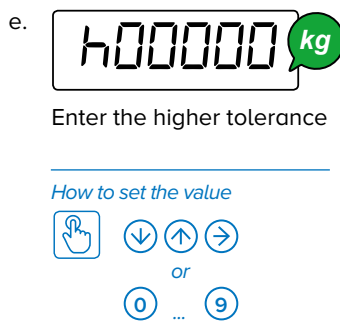

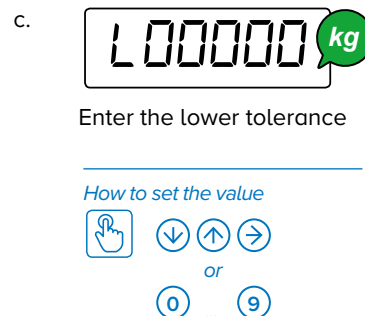

To check a weight of 500 g with + 10 g / - 20 g tolerance (that is, between 480 g and 510 g), set:

t0 0500
L 00020
h 00010

WEIGHT CHECK - CHECK

How to start the check with automatic target acquisition

How to check the weight

WEIGHT CHECK - CHECK

How to update the nominal weight with known reference weight

How to update the nominal weight with automatic target acquisition

How to edit the check thresholds

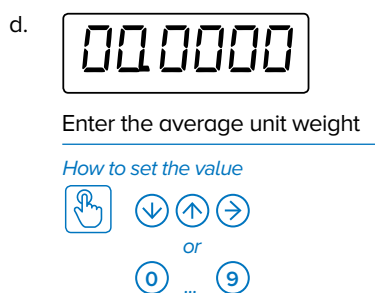

UNIT OF MEASUREMENT CONVERSION - Converter

How to convert the unit of measurement into pounds (standard mode)

Converting the unit of measurement with free conversion factor

Pounds (lb)	1g = 0.00220
Ounces (oz)	1g = 0.03527
Stones (st)	1g = 0.00016
Karats (kt)	1g = 5.00000
Grains (gr)	1g = 15.43240
...	

Any conversion factor must be multiplied to the weight.

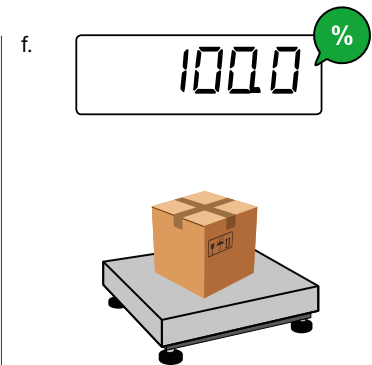

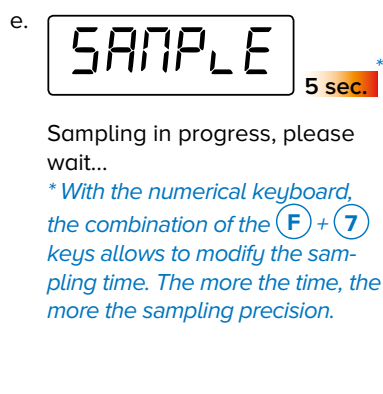

You can convert the unit of measurement with free conversion factor at any time.

PERCENTAGE WEIGHING - PErC

Percentage check

I. How to acquire the 100% reference

II. How to check the weight

You can go from weight in % to weight in kg at any time.

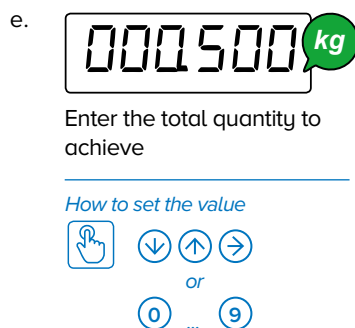

PERCENTAGE WEIGHT - PErC

Percentage metering

Example of formula

Product: RP28K
 1. 2127A3 - 50%
 2. 23AB4 - 30%
 3. Water - 20%
Dose 500g

PERCENTAGE WEIGHT - PErC

You can go from weight in % to weight in kg at any time.

HOLDING WEIGHT ON THE DISPLAY - hold

How to activate the function

The weight on the display is held even when the scale is unloaded.

How to deactivate the function

EXCHANGE BETWEEN NET WEIGHT AND GROSS WEIGHT - *NET.GROSS*

You can go from net weight to gross weight at any time.

CONFIGURATION MENU

HOW TO ACCESS THE CONFIGURATION MENU

a. 

b.  **PRINT**
5 sec.

c. 

The indicator is in the configuration menu.

FAQ

PRINT

The scale does not print

- Another printout is already in progress (bUSy)
- Make sure there is a roll in the printer
- The printer does not switch on
- The weight is unstable (UNStAb)
- The net or gross weight is negative or is insufficient for printing (LoL!)
- Underload or overload (----- o -----) (Un. oUEr)
- The scale was not loaded after the last printing (no. 0. UN5)
- You are trying to print a non-approved weight

ACCUMULATION

The scale does not accumulate

- Make sure there is a roll in the printer
- The printer does not switch on
- The weight is unstable (UNStAb)
- The net or gross weight is negative (LoL!)
- Underload or overload (----- o -----) (Un. oUEr)
- The scale was not unloaded after the last printing (no. 0. UN5)
- The weight is insufficient for weighing (LoL!)
 - less than 10 divisions for the accumulator modes
 - less than "Min" for the approved products (shown on the measuring plate)

The scale has lost the total

- Switching off the scale causes the accumulated totals to be lost.

TARE

The scale does not tare

- The weight is unstable (UNStAb)
- The gross weight is negative (LoL!)
- The weight is insufficient
- The weight exceeds the maximum capacity
- The tare function has been deactivated
- In the event of manual tare, the value exceeds the maximum capacity.

WEIGHING

The scale does not switch on

- Make sure the power cable is connected properly
- Connect the battery charger and try again. If the instrument continues to malfunction, contact the dealer.

The scale switches off suddenly

- Automatic switching off active
- Low battery
- Battery failure
- Power supply line failure

The scale is not reactive

- One of the available energy saving modes has been activated
- An unsuitable weighing filter has been selected

The scale display switches off and displays a dot

- Stand-by mode is active: press a key to reactivate weighing.
- Energy saving mode is active: contact the dealer for further details.

The scale displays a permanent "Err" message

- The scale is unable to automatically reset the weight because it exceeds the maximum resettable weight at switch-on.
- Unload the scale and try again. If the scale continues to have the same problem even when there is nothing on it, contact the dealer.

The weight is unstable

- Check the active weighing filter.
- If the support surface is subjected to vibrations from machinery or moving vehicles, move the scale onto another surface and try again.

PIECE COUNTER

The scale does not carry out sampling

- The weight is unstable (Err. NoE)
- The weight is insufficient, add more pieces and try again (Error)

ERROR MESSAGES

MESSAGE	DESCRIPTION	SOLUTION
<i>bUSY</i>	Another printout is already in progress	Wait for the printout in progress to be finished and try again.
<i>UnStAb</i>	The weight is unstable	Check the weighing filter. If the support surface is subjected to vibrations from machinery or moving vehicles, move the scale onto another surface and try again.
<i>LoW</i>	The net or gross weight is negative or insufficient for printing	Add weight and try again.
<i>Un. ouEr</i>	Underload or overload (<i>_____o_____</i>)	Restore a valid weight condition. If the problem persists, contact customer service.
<i>no. 0. UnS</i>	The scale was not unloaded after the last printing	Completely unload the scale, making sure the →0← light comes on. Reload the weight and try again.
<i>Err. Not</i>	The weight is unstable	Wait for stability (the <i>~</i> light) and try again.
<i>Error</i>	In piece counting mode, the weight is insufficient for proper sampling.	Add more pieces and try again.
